517193-5
; Patent No. 517193
APPLICANT: BOIME, IRVING; MATZUK, MARTIN M.
TITLE OF INVENTION: MODIFIED FORMS OF REPRODUCTIVE HORMONES
NUMBER OF SEQUENCES: 26
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/532,254
FILING DATE: 01-UN-1990
PRIOR APPLICATION DATA:
                                                                         Length 112;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       53.2%; Score 91; DB 1; Length 75; 44.8%; Pred. Patent No. 5508261
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Moyle, William R.
APPLICANT: Campbell, Robert K.
TITLE OF INVENTION: Analogs of Glycoprotein Hormones Having
TITLE OF INVENTION: Analogs of Glycoprotein Hormones Having
TITLE OF INVENTION: Analogs of For Preparing and Using Same
NUMBER OF SEQUENCES: 12
                                                                                                                                                                                                         APPLICANT: Moyle, William R.
APPLICANT: Campbell, Robert K.
TITLE OF INVENTION: Analogs of Glycoprotein Hormones Having
TITLE OF INVENTION: Altered Receptor Binding Specificity and Activity and
NUMBER OF SEQUENCES: 12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2, Application US/08425673

Patent No. 5508261

GENERAL INFORMATION:
APPLICANT: Moyle, William R.
APPLICANT: Campbell, Robert K.
TITLE OF INVENTION: Analogs of Glycoprotein Hormones Having
TITLE OF INVENTION: Altered Receptor Binding Specificity and TITLE OF INVENTION: Methods For Preparing and Using Same
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Choriogonadotrophin/Lutoprin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
Sequence 1, Application US/08298189B
Patent No. 564727
GENERAL INFORMATION:
APPLICANT: Dr. Laurence A. Cole and Dr. Andrew Kardana
TITLE OF INVENTION: No. 5674727el Methods for Detecting Reproductive
TITLE OF INVENTION: Therefor Tumors and Assay Products
TITLE OF INVENTION: Therefor NUMBER OF SEQUENCES: 1
CORRESPONDENCES: 1
CORRESPONDENCE ADDRESS:
ADDRESSEE: Dr. Laurence A. Cole , c/o Dept. of Obstetrics and
STREET: 333 Cedar Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Patent No. 5968513

GENERAL INFORMATION:
APPLICANT: Gallo, Robert C.
APPLICANT: Bryant, Joseph
TITLE OF INVENTION: METHODS OF PROMOTING HEMATOPOIESIS
TITLE OF INVENTION: USING DERIVATIVES OF HUMAN CHORIONIC GONADOTROPIN NUMBER OF SEQUENCES: 26
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 27, Application US/09069226
Patent No. 6013509
GENERAL INCOMMATION:
GENERAL INCOMMATION:
TITLE OF INVENTION: TRANSAMINASES AND AMINOTRANSFERASES
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
ADDRESSEE: CARELLA, BYRNE, BAIN, GILFILLAN,
ADDRESSEE: CECCHI, STEWART & OLSTEIN
STREET: 6 BECKER FARM ROAD
                                                                       GENERAL INFORMATION:
APPLICANT: Warren, Patrick V.
APPLICANT: Swanson, Ronald V.
APPLICANT: Swanson, Ronald V.
TITLE OF INVENTION: TRANSAMINASES AND AMINOTRANSFERASES NUMBER OF SEQUENCES: 4.2
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson, P.C.
STREET: 4.225 Executive Square, Suite 1400
CITY: La Jolla
STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Indels
                                                                                                                                                                                                                                                                                            COMPUTER READBLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 20, Application US/08481377;
Patent No. 5808007;
GENERAL INFORMATION:
APPLICANT: JOHNS HOPKINS UNIVERSITY
TITLE OF INVENTION: GROWTH DIFFERENTIATION FACTOR-3
NUMBER OF SEQUENCES: 29
CORRESPONDENCE SPENSIEY HORN JUBAS & LUBITZ
STREET: 1880 CENTURY PARK EAST, FIFTH FLOOR
CITY: LOS ANGELES
STATE: CALIFORNIA
          Sequence 22, Application US/08478097A
Patent No. 6040431
GEMERAL INFORMATION:
FAPLICANT: KECK, PETER
APPLICANT: SMART, JOHN
TITLE OF INVENTION: SINGLE-CHAIN ANALOGS OF TGF-B
TITLE OF INVENTION: SUPERFAMILY (MORPHONS)
NUMBER OF SEQUENCES: 45
CORRESPONDENCE ADDRESS:
ADDRESSEE: THIBEAULT, LLP
STREET: 125 HIGH STREET

CURRENT APPLICATION DATA:

APPLICATION NUMBER: PCT/US94/00657

FILING DATE: 1/12/94

CLASSIFICATION:

ATTORNEY/AGENT INFORMATION:

NAME: WETHERELL, JR. PH.D., JOHN R.

REGISTRATION NUMBER: 31,678

REGISTRATION NUMBER: 31,678

REGISTRATION NUMBER: 31,678

RELERANCE/DOCKET NUMBER: PD3256 CIP OF PD2280

TELEFORMORICATION INFORMATION:

TELEFORMORICATION OF 22:

SEQUENCE CHARACTERISTICS:

LENGTH: 122 amino acids

TYPE: amino acid

STRANDEDNESS: single

STRANDEDNESS: single

TYPE: Amino acid

STRANDEDNESS: Single

TYPE: JINear

MOJECULE TYPE: protein

INMEDIATE SOURCE:

CLONE: Inhibit-alpha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATTORNEY-AGENT INFORMATION:

C.Superfamily: pituitary glycoprotein hormone beta chain
C.Keywords: blocked maino end: glycoprotein: hormone; pituitary
F:1-20/Domain: signal sequence #status predicted <SIG>
F:21-141/Product: lutropin beta #status experimental <LTB>
F:21-141/Anodified site: blocked amino end (Ser) (in mature form) (probably acetylated)

gonadotropin II beta subunit - cherry salmon
C;Species: Oncorbynchus masou (cherry salmon)
C;Date: 13-Sep-1996 #sequence_revision 13-Sep-1996 #text_change 16-Jul-1999
C;Accession: I5123
R;Kato, Y.; Gen, K.; Maruyama, O.; Tomizawa, K.; Kato, T.
J. Wol. Endocrinol. 11, 275-282, 1993
A;Title: Wolecular cloning of cDNas encoding two gonadotrophin beta subunits (GTH-I b
A;Reference number: I51231; MUID:94197893
                                                                                                                                                                                                                                                                                                                                                                     C;Species: Mus musculus (house mouse)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        follitropin beta chain precursor - mouse

N; Alternate names: follicle-stimulating hormone beta chain
C; Species: Mus musculus (house mouse)
C; Date: 08-Feb-1996 #sequence_revision 19-Apr-1996 #text_change 16-Jul-1999
C; Accession: JC4526
R; Kumar, T.R; Kelly, M.; Mortrud, M.; Low, M.J.; Matzuk, M.M.
Gene 166, 333-334, 1995
A; Title: Cloning of the mouse gonadotropin beta-subunit-encoding genes, I. Structure of A; Reference number: JC4526; MUID:96125215
A; Reference number: JC4526; MUID:96125215
A; Residues: 1-130 < KUM>
A; Rosernatal source: 1205vEv
C; Comment: This protein is a heterodimeric glycoprotein that consists of a common alpha ment, and evolution in reproduction.
C; Genetics: A; Genetics: C; Superfamily: pituitary glycoprotein hormone beta chain
C; Superfamily: pituitary glycoprotein; gonadal differentiation; hormone; reproduction

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nightenate chain precursor - pig
Nightenate names: interstitial cell-stimulating hormone (ICSH) beta chain; luteinizi
C;Species: Sus scrofa domestica (domestic pig)
C;Species: 24-Apr-1984 #sequence_revision 30-Jun-1993 #text_change 24-Nov-1999
C;Accession: A48170; A30322; A01501; A60584

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ultropin beta chain precursor - rat

NiAlternate names: interstitial cell-stimulating hormone (ICSH) beta chain; luteinizing
C; Species: Rattus norvegicus (Norway rat)
C; Date: 14-Nov-1983 #text_change 24-Sep-1999
C; Accession: A01498; PQ0091; S42527; I83049
R; Jameson, L; Chin, W.W.; Hollenberg, A.N.; Chang, A.S.; Habener, J.F.
J. Biol. Chem. 259, 15474-15480, 1984
A; Fitle: The gene encoding the beta-subunit of rat lutenizing hormone. Analysis of gene
A; Reference number: A01498; MUD:85080043
A; Molecule type: DNA
A; Residues: I-141 < 2AA>
A; Reference number: PQ0091

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      lutropin beta chain - minke whale

N; Alternate names: luteinizing hormone beta chain
C; Species: Balaenoptera acutorostrata (minke whale, lesser rorqual)
C; Date: O7-May-1993 #sequence_revision 07-May-1993 #text_change 08-Dec-1995
C; Accession: PM0139
R; Azrasev, V.S.; Penkov, Y.A.
Biokhimiia 50, 1972-1986, 1985
A; Title: Amino acid sequence of reduced and carboxymethylated alpha- and beta-subunits c
A; Reference number: PM0138
A; Accession: PM0138
A; Molecule type: protein
A; Residues: 1-118 cKAR>
A; Note: article in Russian with English abstract
C; Superfamily: pituitary glycoprotein hormone beta chain
C; Reywords: glycoprotein; hormone

gonadorropin II beta chain - arctic cisco
C; Species: Coregonus autumnalis (arctic cisco)
C; Date: 21-Feb-1997 #sequence_revision 21-Feb-1997 #text_change 16-Jul-1999
C;Accession: 150143
R;Trofimova, I.N.; Belikov, S.I.
Rol. Biol. (Wosk.) 28, 1052-1056, 1994
A;Title: [Cloning and sequencing the cDNA for the beta-subunit of Baikal omul gonadot
A;Reference number: 150143; MUID:95082790
A;Accession: 150143
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Residues: 1-142 <TRO>

WiAlternate names: interstitial cell-stimulating hormone (ICSH) beta chain; luteinizing
C;Species: Ovis orientalis aries, Ovis amono aries (domestic sheep)
C;Date: 24-Apr-1984 #sequence_revision 02-May-1994 #text_change 24-Nov-1999
C;Accession: S09232; A92110; A90053; B61098; A01500
C;Accession: S09232; A92110; A90053; B61098; A01500
